

Workers Compensation

Loss control methods are proven to be effective at preventing or mitigating future losses.

Even losses that can't be prevented altogether can be reduced in severity by addressing general concepts common to all good WC surveys.

Our team of experienced consultants can evaluate company operations at both jobsites and the office place, as needed.

Phone and app-based surveys can be utilized for artisan or smaller accounts with good histories to reduce your cost. We're able to carry over our approach to workers compensation on-site surveys to phone surveys.

Methods

A proven approach to safety...

Our surveys focus on several main points:

- Building an accurate description of operations
- Identifying hazards and documenting existing controls or recommending future controls to mitigate those hazards
- Reviewing and analyzing loss runs for trends
- Evaluating hiring and HR policies
- Determining if proper training, tools, and PPE are identified and supplied.
- Understanding the Implementation level applicable OSHA rules for safety and accident reporting
- Safety is made a regular part of the daily discussions in the workplace
- Making recommendations for new and continued safety practices

We can customize our data collections to match your underwriting guidelines to give you the information you need to make sound coverage decisions.
